

# First Aid & Safety Awareness

In order to create a safe work environment at AkiraChix we must do these 3 main things:

- Recognize potential hazards and how to avoid them.
- Promote best practices techniques and procedures for optimal safety.
- Enhance productivity through following guidelines as stated in Akirachix safeguarding policy [document](#).

## Identifying common hazards

Common hazards such as:

1. Fire injuries
2. Choking
3. Heart attack

## Performing safety techniques and procedures

The safety techniques are first aid procedures on first contact with hazard such as:

1. Performing CPR to someone who has a heart attack or who is unconscious due to suffocation.
2. Putting out fire in case of a fire hazard by using a fire extinguisher.
3. Performing the first aid procedure to someone choking as illustrated in this safety guidelines [document](#).

## Following guidelines in AkiraChix Safeguarding Policy

In order to follow the safeguarding policy you have to understand the following:

1. Know your rights, threats and responsibilities.
2. Put in practice all principles and ethics expected of you.
3. Know all the health and safety protocols.
